CERES BLOCKCHAIN SOLUTIONS

A MEMO TO THE SORA COMMUNITY

MAY 2024

This document accompanies the invoice sent to SORA for the services provided by Ceres Blockchain Solutions.

This memo will provide a description of the products, and the total amount of hours presented in invoice served by Ceres Blockchain Solutions to the SORA Community.

The services performed include the design, development, testing, and maintenance of the following products: Ceres Tools Website, Ceres Tools Mobile Apps (iOS and Android), Apollo Protocol and DEO Arena v2.
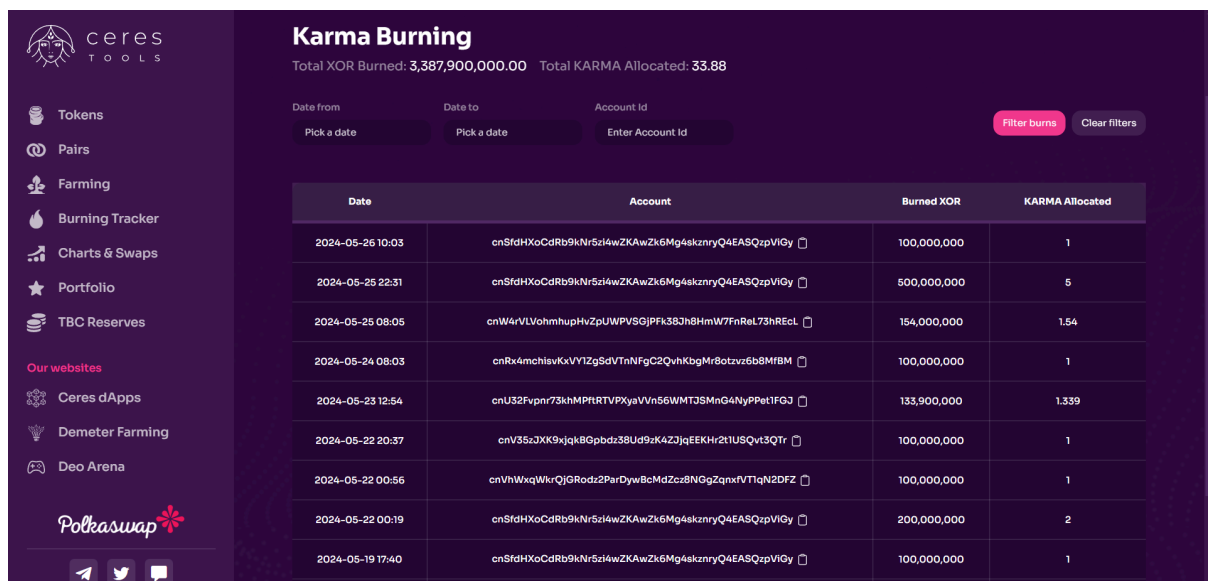

1 Ceres Tools Website – 16 hrs

Ceres Tools (https://tools.cerestoken.io) is a platform for tracking data from Polkaswap Decentralized Exchange (https://polkaswap.io).
Platform consists of six sections: **Tokens, Pairs, Farming, Burning Tracker**, **Portfolio**, **Charts & Swaps** and **TBC Reserves**.

1.1 Tokens

Token prices listed on Polkaswap, their asset IDs, and token locks are displayed in the Tokens section. In this release, a Karma burning tracker has been added (users can track how many XOR is being burned for Karma allocation). The initial $KARMA tokens will be earned by a burn-drop, where you can burn 100 million XOR by block 16,056,666 to earn 1 $KARMA.

2 Ceres Tools Mobile Apps – 8 hrs

Ceres Tools Mobile App is a Ceres Tools Website version as a mobile app. It is available for both Android and iOS. From this release, users can enjoy all the functionalities that have been added to the Ceres Tools website.

Ceres Tools Android App –
https://play.google.com/store/apps/details?id=io.cerestoken.tools
Ceres Tools iOS App –
https://apps.apple.com/gb/app/ceres-tools/id1590032285

3   Maintenance, issues and bug fixing – 32 hrs

4   Apollo Protocol – 240 hrs

The Apollo Protocol is the first lending and borrowing platform on the SORA network. Apollo enables its users to deposit and borrow assets on the SORA network. Depositors can provide liquidity and secure passive income through interest, while borrowers can leverage their assets without selling them and pay interest for this service.
Read more about Apollo Protocol on https://apollo-protocol.gitbook.io.

The Apollo blockchain, backend and frontend parts have been tested and finished. The launch is pending due to the SORA runtime upgrade schedule. We expect it to be launched on June 10.

5   DEO Arena v2 – 192 hrs

The DEO Arena is the first Play-to-Earn game on SORA. In-game currency is the SORA-native token Demeter (DEO). Players spawn in the arena and the goal is to eliminate opponents using different weapons. Each player enters the match with a certain amount of DEO tokens, which are taken by the winner at the end.

DEO Arena stats so far:

- More than 15,000 matches played
- More than 40,000 DEO burned
- More than 40,000$ distributed in rewards

At the insistence of the community, we started the development of DEO Arena v2. This version in the form of Battle Royale Multiplayer will look better and will be much more advanced, fun and playable than the first version. More details are coming soon.
